| IDEs / tools | Rubymine, Eclipse, Android Studio, Sublime Text |
| Proxy server | NGINX |
| Operating System | Ubuntu |
| Cloud Platform Amazon | Amazon Web Services (expert), MS Azure Cloud (beginner) |

WORK HISTORY

OCTOBER 2016 – PRESENT (Project : Uptime Cloud Monitor)

Senior Software Developer | Josh Technology Group | Gurugram, Haryana, India

- Added AWS lambda integrations (Node JS) to make AWS infrastructure more robust.
- Optimized existing infrastructure which led to **huge cost savings**.
- Worked on native android application of the product. Added new features and fixed bugs.
- Handled backlog cleanup, poker planning call, diving work among team members.
- Managing a team of 4 and supervising work of 2 team members.
- Currently working on integrating Microsoft Azure cloud monitoring with the product and moving infrastructure to VPC (setting up VPC and VPC peering).

JUNE 2015 – OCTOBER 2016 (Project : Uptime Cloud Monitor)

Software Developer | Josh Technology Group | Gurugram, Haryana, India

- Worked primarily with Ruby on Rails and a good mix of other technologies as well.

- Improved product – fixed various complex bugs and refactored existing code.
- Documentated various crucial subsystems and did critical switchovers in production.
- Debugged server issues and derived useful stats from system / access logs.
- Protected redis from getting hacked on linode servers.
- Integrated new monitoring features within the existing application.
- Handled sprints, deployments, client communication and daily standups.

EDUCATION

2015

B.Tech Computer Science Engineering

Guru Tegh Bahadur Institute of Technology, New Delhi, India

ADDITIONAL INFORMATION

Made a website in ruby on rails to connect alumni from GTBIT and help students clear their queries. Implemented entire backend, did setup for production environment, static assets caching and mailing.
